

ACTIVITIES REPORT FOR JUNE QUARTER, 2021

Dome Gold Mines Limited (“Dome” or “Company”) (ASX code: DME) is pleased to report on activities at its industrial sand-magnetite, copper and gold projects in Fiji for the period ended 30 June 2021.

The impact of the Covid-19 pandemic continues to present challenges to Dome and many other mineral exploration companies through the June quarter. Given this situation the Company suspended field exploration activities in Fiji while the pandemic is being brought under control. We are encouraged that Australia and Fiji have implemented strong vaccine programs with Fiji reporting that over 75% of the population has received the first dose of the vaccine. We offer our thoughts and prayers to all the people of Fiji who are suffering at this most difficult time.

Although field operations are suspended Company staff in Fiji and Sydney remain operational. Work has continued in preparation for resumption of the Sigatoka Definitive Feasibility Study (DFS). In advance of the DFS, the last stage of JORC 2012 resource drilling was completed and results reported to the market on November 5, 2020 as well as in the December quarterly activities report.

SIGATOKA (SPL1495) BULK SAMPLE PROGRAM

During May and June Dome completed preparatory steps to collect and ship a 15-20 tonne sample of sand containing magnetite and other heavy minerals from Sigatoka to Australia for final pilot plant processing. The sample will be collected from several sites representative of variations in the deposit using an excavator. The sample will be placed into 1 tonne heavy duty bulk bags and loaded into a twenty-tonne marine container for safe shipment to the port of Brisbane.

Operation of the full-scale pilot plant will generate process engineering information for commercial plant design, equipment selection and data needed for determination of detailed capital and operating cost estimates. The pilot plant will also produce large samples of magnetite concentrate and industrial sand for market evaluation and off-take negotiation purposes. Further investigation of the heavy mineral concentrate will also be conducted to determine if other saleable products can be developed. This program represents a major step forward in the DFS study.

Assuming the Fiji Covid pandemic restrictions can be safely managed it is anticipated that the sample will be collected and shipped during August and pilot plant processing commenced shortly after arrival in Australia.

In conjunction with the pilot plant program, the Company is holding discussions with engineering and environmental consultants concerning the time and cost-efficient management of the completion of the DFS and the update of the environmental impact studies. This will be the focus for Dome going forward.

CORPORATE

Expenditure incurred on exploration and related activities during the June 2021 quarter totalled \$49K.

Payments to related parties of the entity and their associates during the June 2021 quarter totalled \$131K, which comprised director's fees.

As at 30 June 2021 Dome held \$201K in cash. During July the Company has successfully raised a further \$900K.

ABOUT DOME

Dome is an Australian mining company that listed on the ASX on the 22 October 2013. The Company is focussed on gold, copper and iron and industrial sands in Fiji, where it holds three highly prospective exploration tenements. Dome's objective is to become a major force in the mining industry of Fiji by the discovery and development of mineral resources within its Fijian tenements.

Sigatoka is a heavy mineral sand project containing abundant magnetite. Drilling to establish an initial resource estimate for the project has been completed, and preparations are now underway to undertake a definitive feasibility study. Commencement of production at Sigatoka by conventional sand mining and wet processing is anticipated within two years.

Our other projects are the Ono Island epithermal gold project, where an initial exploration diamond drilling was completed in early July 2018, and the Nadrau porphyry copper-gold project, where additional exploration programs are expected to take place at a later date.

Dome's Board and Management team has a high level of experience in Fiji, and Dome has been actively exploring in Fiji since 2008.
